2016

AN INTEGRATION OF AHP-ACO TECHNIQUE FOR SOCIAL INTERACTION AND TRAVEL PLANNING

PERLY PEH THAI EE

A thesis submitted in fulfillment of the requirements for the degree of Master of Science in Information and Communication Technology

Faculty of Information and Communication Technology

UNIVERSITI TEKNIKAL MALAYSIA MELAKA

2016

DECLARATION

I declare that this thesis entitled "An integration of AHP-ACO technique for social interaction and travel planning" is the result of my own research except as cited in the references. The thesis has not been accepted for any degree and is not concurrently submitted in candidature of any other degree.

Date	:	

APPROVAL

I hereby declare that I have read this thesis and in my opinion this thesis is sufficient in terms of scope and quality as a partial fulfillment of Master of Science in Information and Communication Technology.

Signature	:	
Supervisor Name	:	
Date	:	

DEDICATION

To my beloved parents, Mr. Peh Hock Beng and Mrs. Tan Sok Ooi, for their expression of love and fully support...

To my supervisor, Associate Professor Dr. Choo Yun Huoy, and co-supervisor,

Associate Professor Dr. Burhanuddin Mohd Aboobaider for making it all worthwhile...

C Universiti Teknikal Malaysia Melaka

ABSTRACT

The current web and mobile computing technologies have encouraged all sorts of applications mushroom in the market. However, most of the application that available does not integrate the place recommendation and route planning. Besides that, improving the processing speed of the algorithm is also another challenge of this research. Thus, the objectives of this research is to integrate the place recommendation based on profile preference using Analytic Hierarchy Process (AHP) method and route planning using ACO method. The second objective of this research is to enhance the processing speed of the proposed AHP-ACO technique in generating the optimum route plan. This study presents the integration methods of AHP algorithm for point of interest decision-making and ACO and rule-based algorithms for route optimization. AHP interest scores based on user preferences, business information and community reviews are used to model decision making. ACO and rule-based algorithms are used to arrange the itinerary of the place of interest that either has been chosen by the user or recommended by the system. The integration AHP-ACO method has been enhanced to reduce the execution time from 5 minutes to 30 seconds for 7 days trip planning. Object Oriented Software Engineering (OOSE) methodology has been used to build the mobile recommender system prototype and web application prototype. Questionnaires have been distributed to collect user feedback. The results show that the integration method is promising for helping the user in making decisions and itinerary arrangements.

ABSTRAK

Teknologi web dan telefon terkini telah menggalakkan perkembangan pelbagai aplikasi dengan pesat di pasaran. Akan tetapi, kebanyakan aplikasi tidak mempunyai cadangan tempat dan perancangan laluan dalam aplikasi yang sama. Selain itu, meningkatkan kelajuan algorithm juga merupakan satu cabaran dalam pengajian ini. Oleh itu, objektif kajian ini adalah untuk mengintegrasikan kaedah Analytic Hierarchy Process (AHP) yang digunakan untuk memilih tempat melancong dan kaedah Ant Colony Optimization (ACO) serta rule-based algorithm yang digunakan untuk pengoptimum laluan. Objektif yang kedua adalah untuk meningkatkan kelajuan pemprosesan teknik AHP-ACO yang menghasilkan laluan optimum. Kajian ini membentangkan kaedah integrasi AHP dan ACO. Skor AHP berdasarkan pilihan pengguna, maklumat perniagaan dan ulasan masyarakat digunakan untuk membuat keputusan memilih tempat pelancongan. ACO dan rule-based algorithm digunakan untuk menyusun jadual perjalanan bagi lokasi pilihan yang sama ada telah dipilih oleh pengguna atau disyorkan oleh sistem. Kaedah integrasi AHP-ACO telah diubahsuai untuk mengurangkan masa pelaksanaan dari 5 minit ke 30 saat untuk 7 hari perancangan perjalanan.Object Oriented Software Engineering (OOSE) metodologi telah digunakan untuk membina sistem prototaip dan aplikasi web prototaip. Borang soal selidik telah diedarkan untuk mengumpul maklum balas pengguna. Hasil kajian menunjukkan bahawa kaedah integrasi ini membantu pengguna dalam membuat keputusan dan mengatur jadual perjalanan.

ACKNOWLEDGEMENTS

I would like to extend my gratitude to all those who have contributes directly and indirectly in completing this project.

Firstly, I would like to give a special thanks to my supervisor, Associate Professor Dr. Choo Yun Huoy for giving me assistance, guidance and encouragement to complete this project successfully.

I would also like to thank Associate Professor Dr. Burhanuddin Mohd Aboobaider, who has given his comment and advice to improve the project.

I would like to thank Faculty of Information and Communication Technology's lecturers that have taught me. With all the knowledge that they have taught me, I manage to complete my project in time.

I would also like to thank my classmates for making this study a wonderful experience. Besides that, I would like to thank my friends that have accessed to my system and giving me valuable and sincere comments.

Finally, I would like to express my sincere thanks to my parents who have given me full support for the encouragement, inspiration and patience which they provided at every step during this course of studies.

5.15	Navigation flow of the history module for mobile	98
	application	
5.16	System architecture of Intelligent Vacation Planner system	99
	for web application	
5.17	Navigation flow of login module for web application	100
5.18	Navigation flow of registration module for web application	102
5.19	Navigation flow of registration module for web application	103
	(Continue)	
5.20	Navigation flow of forgot username module for web	104
	application	
5.21	Navigation flow of forgot password module for web	105
	application	

5.22	Navigation flow of edit personal or login details module for	107
	web application	
5.23	Navigation flow of change password module for web	108
	application	
5.24	Navigation flow of place module for web application	109
5.25	Navigation flow of place module for web application	110
	(Continue)	
5.26	Navigation flow of promotion module for web application	111
5.27	Navigation flow of promotion module for web application	112
	(Continue)	
5.28	ERD diagram	116
6.1	Deployment diagram of the environment architecture	127
6.2	The output of the itinerary for day 1 using enhance	138
	integration AHP-ACO method	
6.3	The output of the itinerary for day 2 using enhance	138
	integration AHP-ACO method	

LIST OF APPENDICES

APPENDIX	TITLE	PAGE
А	Questionnaire for functionality test	171
В	Questionnaire for preliminary study	174

LIST OF ABBREVIATIONS

ACO	-	Ant Colony Optimization
ACS	-	Ant Colony System
AHP	-	Analytic Hierarchy Process
AIDL	-	Android Interface Definition Language
AS	-	Ant System
API	-	Application Program Interface
BAO	-	Bee Algorithm Optimization
CBRS	-	Content-based recommender system
CI	-	Consistency index
CRS	-	Collaborative-based recommender system
CR	-	Consistency ratio
DRS	-	Demographic recommender system
HRS	-	Hybrid recommender system
HTML	-	Hypertext Markup Language
HTTP	-	Hypertext Transfer Protocol
IC	-	Identity Card
ICT	-	Information Communication Technologies
ID	-	Identity
IDE	-	Integrated Development Environment
iOS	-	iPhone Operating System
ERD	-	Entity Relationship Diagram
GA	-	Genetic Algorithm
GMM	-	Geometric Mean Method
GPS	-	Global Positioning System
JSON	-	JavaScript Object Notation
JSP	-	Java Server Pages

xvii

KBRS	-	Knowledge based recommender system
MMAS	-	MAX-MIN Ant System
OAT	-	Operational Acceptance Testing
OOP	-	Object-oriented programming
OOSE	-	Object-Oriented Software Engineering
OS	-	Operating System
POI	-	Point of interest
PSO	-	Particle Swarm Optimization
SA	-	Simulated Annealing
SDK	-	Software Development Kit
SIT	-	System Integration Testing
SP	-	Service Pack
SQL	-	Structured Query Language
TSP	-	Travelling Salesman Problem
UAT	-	User Acceptance Testing
UBRS	-	Utility based recommender system
UI	-	User interface
UML	-	Unified Modeling Language
VM	-	Virtual Machine
WSM	-	Weighted Sum Model
XML	-	Extensible Markup Language

xviii
