Master of Computer Science (Internetworking Technology)

2016

**ENHANCEMENT QUALITY OF SERVICE AT ADTECBP LAN USING TRAFFIC  
POLICING**

**WAN MUHAMMAD HAZWAN BIN AHMAD AZAMUD-DIN**

**A project submitted  
in fulfillment of the requirements for the degree of Master of Computer Science  
(Internetworking Technology)**

**Faculty of Information and Communication Technology**

**UNIVERSITI TEKNIKAL MALAYSIA MELAKA**

**2016**

## **DEDICATION**

*Alhamdulillah*

*To my beloved wife and dearest daughter*

*Hasfazila binti Simin*

*To my beloved Mother and Father*

*Shahrifah Hafizah Syed Abd Rahman and Ahmad Azamud-din Aman*

*To my beloved Supervisors*

*To my beloved brothers*

*To my beloved friends*

## **DECLARATION**

I declare that this project entitled “Enhancement Quality Of Service at ADTECBP LAN using Traffic Policing” is the result of my own research except as cited in the references. The thesis has not been accepted for any degree and is not concurrently submitted in candidature of any other degree.

Name : .....

Date : .....

## **APPROVAL**

I hereby declare that I have read this project and in my opinion this project is sufficient in term of scope and quality for the award of Master of Computer Science (Internetworking Technology).

Signature : .....

Supervisor Name : Dr. Zul Azri bin Muhamad Noh

Date : .....

## **ABSTRACT**

Mainly, an Internet service provider (ISP) provides best-effort service to all customers that subscribe to it and Quality of Service (QoS) is only given by provider if it being request. While traffic become congested, initial setting of configuration doesn't resolve this issue. Current trending on network nowadays with convergence of data, voice and video it is important for network administrator to classify the traffic by using QoS mechanism. In applying differentiated QoS, router will classify and remarked the traffic to utilize the network. Regarding the Service Level Agreement (SLA), classification the traffic will make router to use more resources. Outcome from the result is very important by implementing these methods by using for network system administration, network engineer and others. In order study effectiveness by applying QoS on network, appropriate methodology need to be applied. Objective for this setup is to categorize network performance metrics such as throughput, jitter and packet loss based on multiple traffic accessing the router. Remarking and classify traffic will make router will do more work. Certain devices, performance become dropped when enabling this method. Another method is by make combination of classification, remarking and apply traffic policing. This method will deteriorate throughput at the egress router. Other than that, jitter and packet loss also will be increased by implementing traffic policing. Jitter, throughput and packet loss will be measured by using network performance tools such as IPERF. Regarding from previous review of literature, ISP or network provider need to concern about their SLA and providing service of network to avoid issue that will be discussed on thesis.

## **ABSTRAK**

Terutamanya, pembekal perkhidmatan Internet (ISP) menyediakan perkhidmatan usaha terbaik kepada semua pelanggan yang melanggan dan Kualiti Perkhidmatan (QoS) hanya diberikan oleh pembekal jika ia menjadi permintaan. Walaupun trafik menjadi sesak, penetapan awal konfigurasi tidak menyelesaikan isu ini. Perkembangan semasa ke atas rangkaian pada masa kini dengan penumpuan data, suara dan video adalah penting untuk rangkaian kepada pentadbir untuk mengklasifikasikan lalu lintas dengan menggunakan mekanisme QoS. Dalam menggunakan QoS berbeza, router akan mengelaskan dan berkata trafik untuk menggunakan rangkaian. Mengenai Perjanjian Tahap Perkhidmatan (SLA), klasifikasi trafik akan membuat router untuk menggunakan lebih banyak sumber. Hasil daripada keputusan yang sangat penting dengan melaksanakan kaedah ini dengan menggunakan untuk pentadbiran sistem rangkaian, jurutera rangkaian dan lain-lain. Untuk keberkesanan kajian dengan menggunakan QoS pada rangkaian, kaedah yang sesuai perlu digunakan. Objektif untuk projek ini adalah untuk mengkategorikan metrik prestasi rangkaian seperti pemprosesan, ketar dan kehilangan paket berdasarkan pelbagai trafik mengakses router. Penyemakan Semula dan mengelaskan trafik akan membuat router akan melakukan lebih banyak kerja. Peranti tertentu, prestasi menjadi jatuh apabila membolehkan kaedah ini. Kaedah lain adalah dengan make gabungan klasifikasi, mengulas dan memohon kepolisan lalu lintas. Kaedah ini akan merosot pemprosesan di router jalan keluar. Selain daripada itu, ketar dan kehilangan paket juga akan dipertingkatkan dengan melaksanakan kepolisan lalu lintas. Ketar, pemprosesan dan kehilangan paket akan diukur dengan menggunakan alat prestasi rangkaian seperti IPERF. Mengenai daripada kajian sebelum sastera, ISP atau pembekal rangkaian perlu keimbangan mengenai SLA dan perkhidmatan yang menyediakan rangkaian untuk mengelakkan isu yang akan dibincangkan pada tesis.

## **ACKNOWLEDGEMENTS**

I would like to express appreciation to my supervisor Dr. Zul Azri bin Muhamad Noh, for their guidance and excellent supervision. Special thanks to the staff in Faculty of Information and Communication Technology at Universiti Teknikal Malaysia Melaka for facilitating the process and for helping me throughout my project.

Many thanks to my colleagues especially Madam Siti Rodhiah, Madam Norafiqah that give fully commitment and contribution on development my project and my research work.

Finally, I would like to extend my greatest indebtedness to my family, my lovely wife, Madam Hasfazila Simin, and my dearest daughter for giving me fully morale support in order to completing my project. Also thankful to my father, Ahmad Azamuddin Aman and my mother, Sharifah Hafizah Syed Ab. Rahman for supporting my career, target of live, sponsoring in my study and grab my scroll of degree at the end of journey.

<b>2. LITERATURE REVIEW</b>	<b>15</b>
2.0 Introduction	15
2.1 Literature Review	15
2.2 QoS and network convergence by using throughput	17
2.3 QoS based on bandwidth utilization	18
2.4 QoS performance provided by ISP	19
2.5 QoS parameter for network performance	21
2.5.1 Network Availability	21
2.5.2 Bandwidth	22
2.5.3 Delay	23
2.6 Traffic Policing compared to Traffic Shaping	23
2.7 Conclusion	24

<b>3. METHODOLOGY</b>	<b>25</b>
3.0 Introduction	25
3.1 Categorization of QoS mechanism	26
3.2 Testbed setup	29
3.2.1 Test 1 : No classification and no policy applied	30
3.2.2 Test 2 : Classification and no policy applied	30
3.2.3 Test 3 : Classification and policy applied	30
3.3 Hardware implementation by using CISCO equipment	30
3.4 Virtual Local Area (VLAN) Implementation	31
3.5 Traffic Policing	32
3.6 Conclusion	33
<b>4. TESTBED IMPLEMENTATIONS</b>	<b>34</b>
4.0 Upgrading ADTEC BP LAN from actual	34
4.1 Router CISCO Implementation	35
4.2 CISCO Switch Implementation	39
4.3 Experimental Setup	39
4.3.1 Case 1 : No classification and no policy applied	40
4.3.2 Case 2 : Classification and no policy applied	42
4.3.3 Case 3 : Classification and policy applied	42
4.4 Network performance measurement	44
4.4.1 Measuring the throughput	44
4.4.2 Measuring the jitter	44
4.5 Conclusion	44
<b>5. RESULT AND ANALYSIS</b>	<b>46</b>
5.0 Case 1 : No classification, no policy applies and no remarking (TCP)	46
5.0.1 Test 1 : Single parallel stream implementation	46
5.0.2 Test 2 : Two parallel stream implementation	48
5.0.3 Test 3 : Three parallel stream implementation	50
5.0.4 Test 4 : Four parallel stream implementation	51
5.1 Case 2 : No classification, no remarking and no policy applied (UDP)	53
5.1.1 Test 1.1 : Single stream implementation (1.0 Mbps)	53
5.1.2 Test 1.2 : 2 parallel stream implementation (1.0 Mbps)	54
5.1.3 Test 1.3 : 3 parallel stream implementation (1.0 Mbps)	55
5.1.4 Test 1.4 : 4 parallel stream implementation (1.0 Mbps)	56
5.1.5 Test 2.1 : Single stream implementation (2.0 Mbps)	57
5.1.6 Test 2.2 : 2 parallel stream implementation (2.0 Mbps)	59
5.1.7 Test 2.3 : 3 parallel stream implementation (2.0 Mbps)	59
5.1.8 Test 2.4 : 4 parallel stream implementation (2.0 Mbps)	60
5.1.9 Test 3.1 : Single stream implementation (3.0 Mbps)	61
5.1.10 Test 3.2 : 2 parallel stream implementation (3.0 Mbps)	62
5.1.11 Test 3.3 : 3 parallel stream implementation (3.0 Mbps)	63
5.1.12 Test 3.4 : 4 parallel stream implementation (3.0 Mbps)	64
5.1.13 Test 4.1 : Single stream implementation (4.0 Mbps)	65
5.1.14 Test 4.2 : 2 parallel stream implementation (4.0 Mbps)	66

5.1.15	Test 4.3 : 3 parallel stream implementation (4.0 Mbps)	67
5.1.16	Test 4.4 : 4 parallel stream implementation (4.0 Mbps)	68
5.2	Case 3 : Classification and no policy applied	69
5.3	Case 4 : Classification and policy applied (TCP test)	71
5.3.1	Test 1 : Single parallel stream implementation	71
5.3.2	Test 2 : Two parallel stream implementation	73
5.3.3	Test 3 : Three parallel stream implementation	74
5.3.4	Test 4 : Four parallel stream implementation	76
5.4	Case 5 : Classification and policy applied (UDP Test)	78
5.4.1	Test 1.1 : Single stream implementation (1.0 Mbps)	79
5.4.2	Test 1.2 : 2 parallel stream implementation (1.0 Mbps)	80
5.4.3	Test 1.3 : 3 parallel stream implementation (1.0 Mbps)	81
5.4.4	Test 1.4 : 4 parallel stream implementation (1.0 Mbps)	82
5.4.5	Test 2.1 : Single stream implementation (2.0 Mbps)	83
5.4.6	Test 2.2 : 2 parallel stream implementation (2.0 Mbps)	84
5.4.7	Test 2.3 : 3 parallel stream implementation (2.0 Mbps)	85
5.4.8	Test 2.4 : 4 parallel stream implementation (2.0 Mbps)	86
5.4.9	Test 3.1 : Single stream implementation (3.0 Mbps)	87
5.4.10	Test 3.2 : 2 parallel stream implementation (3.0 Mbps)	88
5.4.11	Test 3.3 : 3 parallel stream implementation (3.0 Mbps)	89
5.4.12	Test 3.4 : 4 parallel stream implementation (3.0 Mbps)	90
5.4.13	Test 4.1 : Single stream implementation (4.0 Mbps)	91
5.4.14	Test 4.2 : 2 parallel stream implementation (4.0 Mbps)	92
5.4.15	Test 4.3 : 3 parallel stream implementation (4.0 Mbps)	93
5.4.16	Test 4.4 : 4 parallel stream implementation (4.0 Mbps)	94
5.5	Conclusion	95
5.5.1	Throughput test based on TCP	95
5.5.2	Throughput test based on UDP	95
