## DECLARATION

I declare that this thesis entitled “Entrepreneurial Characteristics and Firm Performance of Small and Medium Enterprises in Malaysian Food Manufacturing Industry” is the result of my own research except as cited in the references. The thesis has not been for any degree and is not concurrently submitted in candidature of any other degree.

Signature : .....

Name : NorzalizahBintiBahari

Date : 18 July 2018

## APPROVAL

I hereby declare that I have read this thesis and in my opinion this thesis is sufficient in terms of scope and quality for the award of Doctor of Philosophy.

Signature : .....

Supervisor Name : Assoc. Prof. Dr. Ahmad Rozelan Yunus

Date : 18 July 2018

## **DEDICATION**

This thesis is specially dedicated to:

My beloved parents, Bahari Abu Bakar and HalimahBaharomand my family.

## ABSTRACT

Small and Medium Enterprises (SMEs) make a significant contribution to the national economy in Malaysia and there have been concerted efforts by the government over the years to assist SMEs in setting up and expanding their business. With their smaller operations, lower capital outlay and limited human resources, the business models of SMEs are significantly different from large corporations and require a different approach. This study draws upon the concept of entrepreneur characteristics, strategic orientation and attempts to examine how such approaches help improve the performance of SMEs in Malaysia. Using the Resource-Based View as the theoretical foundation, this study has combined the entrepreneur's entrepreneurial characteristics such as internal locus of control, need for cognition and need for achievement as enabling elements for firms to develop their sustained competitive advantage. As a consequence, this study employs market and entrepreneurial orientation as mediating variable and GSPs is employed as moderator on each variable in this research in order to reflect factors that can intervene in the actions of a firm and its performance in real life. Data were collected from SME food manufacturing firms in Malaysia using a cross sectional study design and stratified random sampling method. A total of 396 usable questionnaires were collected using conducting face to face question and answer session through the set of questionnaire and online survey method and analyzed with Covariance-Based SEM (CB-SEM). 12 out of 18 hypothesized relationships were supported. This study found internal locus of control and need for cognition have direct relationship with firm performance, while need for achievement has non-significant relationship with firm performance. Furthermore, market and entrepreneurial orientation have strong influence with firm performance that revealed significant mediating effect. GSPs also moderates the relationship between entrepreneur's entrepreneurial characteristics, market orientation, entrepreneurial orientation and firm performance. This research makes several theoretical contributions and provides further insights on the relationship between entrepreneur's entrepreneurial characteristics and impacts on performance of food manufacturing industry. From the managerial viewpoint, this study provides a valid and applicable framework for food manufacturing industry to have entrepreneur who able to be competitive and enable the adoption of market and entrepreneurial orientation and the role of GSPs as moderator in their organizations. Practical contribution indicates that the reflection of entrepreneur's characteristics and will influence on the firm's strategy and outcomes. The implications of this study to the policy makers, academics and food manufacturing practitioners is enhancing the awareness of the intangible resources already owned by the firm and the impact of market and entrepreneurial orientation towards achieving better firm performance. This study could also be a useful tool in selecting team members for management team and evaluating applicants for partnership and joint venture potential. In other words, the selection of the business strategies and the cultural development are the practices of "actions" or the entrepreneurial characteristics of the managers/owners.

## ABSTRAK

Perusahaan Kecil dan Sederhana (PKS) telah membuat sumbangan penting kepada ekonomi negara di Malaysia dan sejak beberapa tahun kebelakangan ini, pelbagai usahabersepadu telah dilaksanakan oleh kerajaan dalam membantupenubuhan PKS dan cara untuk mengembangkan perniagaan mereka. Dengan operasi mereka yang lebih kecil, aliran keluar modal yang lebih rendah dan sumber manusia yang terhad, model perniagaan PKS adalah jauh berbeza daripada syarikat-syarikat besar dan memerlukan pendekatan yang berbeza. Kajian ini mengemukakan konsep ciri-ciri usahawan, orientasi strategik dan cuba untuk mengkaji bagaimana pendekatan seperti ini dapat membantumeningkatkan prestasi PKS di Malaysia. Kajian ini menggunakan 'Resource-Based View' sebagai teori asas dan menggabungkan ciri-ciri usahawan untuk menggambarkan jenistindakan yang berkaitan dengan pendekatan perniagaan seperti "internal locus of control", "need for cognition" dan "need for achievement". Di samping itu, kajian ini menggunakan orientasi strategik sebagai pengantaradan program sokong kerajaan sebagai moderator pada setiap pemboleh ubah dalam kajian ini adalah untuk mencerminkan factor persekitaran luaran yang boleh campurtangan dalam tindakan firma dan prestasinya dalam kehidupan sebenar. Data dikutip daripada PKS firma-firma pembuatan pemakanan di Malaysia menggunakan rekabentuk kajian keratan rentas dan kaedah persampelan rawak berstrata. Sejumlah 396 borang soal selidik yang boleh digunakan telah dikumpul menggunakan kaedah temuduga dalam talian dan dianalisa dengan 'Covariance-Based SEM' (CB-SEM). 12 daripada 18 hubungan hipotesis telah disokong. Kajian ini mendapati ciri-ciri keusahawanan mempunyai hubungan langsung dengan prestasi firma, manakala orientasi keusahawanan dan orientasi pasaran mempunyai hubungan yang tidak signifikan dengan prestasi firma. Selain itu, orientasi keusahawanan dan orientasi pasaran mempunyai pengaruh yang kuat dengan prestasi firma yang menunjukkan kesan pengantaraan yang signifikan. Program sokong kerajaan juga menyederhanakan hubungan antaraciri keusahawanan, orientasi strategik dan prestasi firma. Penyelidikan ini membuat beberapa sumbangan teoritis dan memberikangambaran lebih lanjut tentang ciri-ciri keusahawanan dan impakterhadap prestasi industri pembuatan makanan. Dari segi pengurusan, kajian ini menyediakan rangkakerja yang sah dan sesuai untuk industri pembuatan makanan untuk mempunyai usahawan yang mampu bersaing dan membolehkan penerapan orientasi strategik dalam organisasimereka. Sumbangan praktikal menunjukkan bahawa wujudnya interaksi antara program sokong kerajaan, ciri-ciri keusahawanan dan strategidalam meningkatkan prestasi firma. Implikasi dalam kajian ini kepada pembuat dasar, ahli akademik dan pengamal pembuatan makanan adalah meningkatkan kesedaran tentang manfaat yang dimiliki oleh syarikat dan impakterhadap prestasi firma yang lebih baik, dan mengkajisemuladasar dan peraturan kemapanaan di Malaysia. Kajian ini juga boleh dijadikan sebagai alat untuk memilih ahli kumpulan dalam kumpulan pengurusansertata boleh jugadigunakan dalam menilai permohonan untuk perkongsian dan us

## **ACKNOWLEDGEMENTS**

Alhamdulillah. Praise be to Allah (SWT) the Almighty for the successful completion of this thesis as through His Grace and the prayers of my loved ones, this challenging journey in the pursuit of my PhD study has finally reached its destination. I could have never done this alone without the support of loving people around me.

This dissertation would not have been possible without the invaluable guidance, support, love and encouragement of many individuals. I would firstly like to take this opportunity to gratefully acknowledge my supervisor, Associate Professor Dr. Ahmad Rozelan Yunus and my co-supervisor Associate Professor Dr. Juhaini Jabar who has provided valuable feedback and encouragement throughout the course of composing this thesis. The completion of this dissertation would not have been possible without their direction and mentoring.

Secondly, I owe this determination to my aunt Associate Professor Dr. Norasiken Bakar who had given constructive guidance and intellectual inspiration throughout the process and my entire doctoral program. Above all, my heartfelt thanks go to members of my exceptional family including my beloved parents, Zaiha, Haslina, Hidayah, Taufiq, Tarmizi, Mazni, Azwan, Nizam and others family members. Their love and support have enabled me to achieve this academic milestone. Besides, I would like to express my gratitude to Noor A'isyah who has furnished me with her support, encouragement, thoughts, and prayers.

Thirdly, I am most indebted to Dr. Siti Hajar, Dr. Mastura, Dr. Maizura, and Dr. Nurul Izwa who have assisted me in the Structural Equation Modelling (SEM) analysis and other statistical aspects of this thesis. Also to help in any way they could, and to remind me not to give up in spite of many adversities. Along with those mentioned above, thanks go to my colleagues and friends for their love and companionship throughout this process. Finally, I express my sincere thanks to Malaysian Ministry of Education for the financial support and opportunity to bring an aspiration to reality.

# CHAPTER 1

## INTRODUCTION

This chapter discusses the research background, problem statement, research objectives, research questions, as well as the scope and significance of study. It also underlines the need for more research on government support program, entrepreneurial characteristics and the choice of market orientation and entrepreneurial orientation in developing countries to help entrepreneurs remain competitive and able to achieve higher firm performance. Additionally, this chapter examines the moderating effect of government support program in the relationship between entrepreneurial characteristics and firm performance in the food manufacturing industry (FMI). Finally, the thesis organization is presented in this chapter.

### 1.1 Research Background

The Small and Medium Enterprises have a strong influence on globalized and competitive business environment in developing and developed economies (Ladzani and Van Vuuren, 2002). SMEs are among the major contributors in a country's economic activities, playing an important role in its economic growth, innovation, and employment creation. A report from the Organization for Economic Co-operation and Development (OECD, 2009) Turin Roundtable identified SMEs as a major economic player in the OECD countries. Asia Pacific Economic Cooperation (APEC) advises its member

countries to place high priority on nurturing SMEs as they help in the economic development of individual nation and encourage the flow of trade and investment activities among different economies in the APEC region (Karikomi, 1998). According to OECD (1997), SMEs are a valuable source of employment with future growth prospect for many countries across the globe. In some countries such as Italy, South Korea, and China, SMEs contribute up to 60% of their total national exports (Knight, 2000). Also, SMEs are accounted for about 35% of exports from Asia and 26% of exports from developed countries (OECD, 1997). Not only do SMEs contribute to the economic development of a country, the level of their success also acts as a measure of efficacy of government policy in nurturing entrepreneurial culture in an economy. For instance, Singapore launches a comprehensive policy called SME Master Plan in 1989 to promote entrepreneurship by assisting SMEs in areas like tax incentives, financial assistance, technology adaptation, business development and marketing (Volery and Schaper, 2007).

In the context of developing countries, the SMEs assist in economic growth, improve productivity, efficiency, and create more job opportunities (Abdullah et al., 2011). Nonetheless, only successful SMEs are able to influence the economic growth of a country. Therefore, it is important to understand the factors leading towards their success, especially in the context of developing countries like Malaysia. The outstanding performance of SMEs would largely contribute in creating more jobs, increasing trading activities, as well as improving gross domestic product (GDP). However, there is a lack of consistency in regard to the important factors towards achieving SMEs' superior performance (O'Regan and Ghobadian, 2004). For example, some researchers consider the internal factors or the entrepreneurial characteristics in determining firm performance, while others highlighted the strong impacts of external factors such as business environment, government policy, and financial assistance.
