## DECLARATION

I declare that this thesis entitled "**Disruptive Innovation Factors Influencing Financial Service Performance: An In-depth Analysis at the Mohammad Bin Rashid Centre for Government Innovation, Dubai, UAE**" is the result of my research except as cited in the references. The thesis has not been accepted for any degree and is not concurrently submitted in the candidature of any other degree.

## APPROVAL

I hereby declare that I have read this thesis, and in my opinion, this thesis is sufficient in terms of scope and quality for the award of Doctor of Philosophy.

Signature : .....

Supervisor : Associate Professor Dr. Mohammed Hariri Bakri

Name : .....

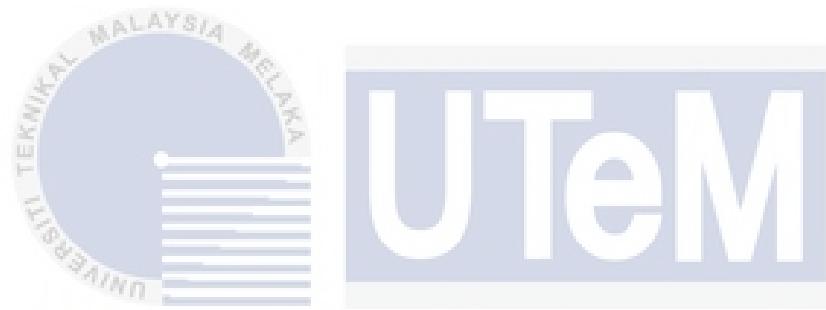

Date : 18.10.2024

## ABSTRACT

The concept of disruptive innovation, characterised by the introduction of novel products or services that fundamentally alter the market landscape, has become increasingly pivotal in shaping the trajectories of economic sectors, mainly financial services performance. This study delves into the impact of disruptive innovation on financial service performance, with a specific focus on the UAE, using the Mohammad Bin Rashid Centre for Government Innovation in Dubai as a case study. By synthesising the Innovation Diffusion Theory and the Technology Acceptance Model, this research constructs a conceptual framework to explore how disruptive innovation factors, mediated by disruptive business models and moderated by disruptive technologies, influence financial service performance. Employing a quantitative methodology, data were gathered from 315 executive banking officers through structured questionnaires and analysed using Structural Equation Modelling (SEM). The findings underscore the significant positive relationships between economic, environmental, and social factors of disruptive innovation and financial service performance. Furthermore, the study highlights the critical mediating role of disruptive business models and the moderating influence of disruptive technology in this dynamic. Theoretically, this research enriches the discourse on disruptive innovation by integrating the Innovation Diffusion Theory and the Technology Acceptance Model to offer a nuanced understanding of the mechanisms through which disruptive innovation factors affect financial service performance. It advances a holistic view of talent management (TM) by transcending the traditional binary of inclusive versus exclusive approaches, advocating for a synergistic integration of TM mindset and TM strategies. This approach provides a fresh perspective on the interplay between disruptive innovation and financial service performance, underpinned by the principles of Social Exchange Theory (SET), which elucidates the mediating effects of job engagement and satisfaction in the TM-performance nexus. Practically, the insights gleaned from this study are poised to inform policy formulation and strategic decision-making in the UAE. By delineating the pathways through which disruptive technologies and business models can bolster financial service performance, the findings offer actionable intelligence for policymakers aiming to foster an innovation-driven economic environment and for managers seeking to harness disruptive innovations to enhance competitiveness and efficiency in the financial sector. In sum, this study contributes to the theoretical enrichment of disruptive innovation literature and provides a pragmatic blueprint for leveraging disruptive technologies and business models to propel the growth and dynamism of financial services in the UAE.

**FAKTOR INOVASI MENGGANGGU YANG MEMPENGARUHI PRESTASI  
PERKHIDMATAN KEWANGAN: ANALISIS MENDALAM DI PUSAT INOVASI  
KERAJAAN MOHAMMAD BIN RASHID, DUBAI, UAE**

**ABSTRAK**

*Konsep inovasi mengganggu, yang dicirikan oleh pengenalan produk atau perkhidmatan baru yang secara asasnya mengubah landskap pasaran, telah menjadi semakin penting dalam membentuk trajektori sektor ekonomi, terutamanya perkhidmatan kewangan. Kajian ini menyelami impak inovasi mengganggu terhadap prestasi perkhidmatan kewangan, dengan fokus khusus pada UAE, menggunakan Pusat Inovasi Kerajaan Mohammad Bin Rashid di Dubai sebagai kajian kes. Dengan mensintesis Teori Penyebaran Inovasi dan Model Penerimaan Teknologi, penyelidikan ini membina kerangka konseptual untuk meneroka bagaimana faktor inovasi mengganggu, yang dimediasi oleh model perniagaan mengganggu dan dimoderasi oleh teknologi mengganggu, mempengaruhi prestasi perkhidmatan kewangan. Dengan menggunakan metodologi kuantitatif, data dikumpulkan dari 315 pegawai perbankan eksekutif melalui soal selidik berstruktur dan dianalisis menggunakan Pemodelan Persamaan Struktural (SEM). Penemuan menekankan hubungan positif yang signifikan antara faktor ekonomi, persekitaran, dan sosial inovasi mengganggu dan prestasi perkhidmatan kewangan. Selanjutnya, kajian ini menyoroti peranan mediasi kritikal model perniagaan mengganggu dan pengaruh moderasi teknologi mengganggu dalam dinamik ini. Secara teorinya, penyelidikan ini memperkayakan wacana tentang inovasi yang mengganggu dengan mengintegrasikan Teori Penyebaran Inovasi dan Model Penerimaan Teknologi untuk menawarkan pemahaman yang lebih halus mengenai mekanisme di mana faktor inovasi mengganggu mempengaruhi prestasi perkhidmatan kewangan. Ia memajukan pandangan holistik pengurusan bakat (TM) dengan mengatasi binari tradisional pendekatan inklusif berbanding eksklusif, menyokong integrasi sinergistik minda TM dan strategi TM. Pendekatan ini menyediakan perspektif baru mengenai interaksi antara inovasi mengganggu dan prestasi perkhidmatan kewangan, yang disokong oleh prinsip Teori Pertukaran Sosial (SET), yang menjelaskan kesan mediasi penglibatan kerja dan kepuasan dalam hubungan TM-prestasi. Secara praktikal, wawasan yang diperolehi dari kajian ini bersedia untuk memberi informasi kepada pembentukan dasar dan pembuatan keputusan strategik di UAE. Dengan menggariskan laluan di mana teknologi dan model perniagaan mengganggu dapat meningkatkan prestasi perkhidmatan kewangan, penemuan menawarkan kecerdasan tindakan bagi pembuat dasar yang bertujuan untuk mendorong persekitaran ekonomi yang didorong oleh inovasi dan bagi pengurus yang berusaha untuk memanfaatkan inovasi mengganggu untuk meningkatkan daya saing dan kecekapan dalam sektor kewangan. Kesimpulannya, kajian ini tidak hanya menyumbang kepada pengayaan teoretikal literatur inovasi mengganggu tetapi juga menyediakan cetak biru pragmatik untuk memanfaatkan teknologi dan model perniagaan mengganggu untuk mendorong pertumbuhan dan dinamisme perkhidmatan kewangan di UAE.*

## ACKNOWLEDGEMENTS

My supervisor, Associate Professor Dr. Mohamad Hariri bin Bakri, guided me and provided me with consistent assistance while I finished my thesis, and for that, I want to convey my sincere gratitude. His encouragement and support have helped me to approach finishing my thesis with a positive outlook, and I am grateful for that. I'm thankful to my wife, kids, and parents for their support, prayers, and unending tolerance and for helping me prepare for the future by helping me finish my research.

# CHAPTER 1

## INTRODUCTION

### 1.1 Introduction

This thesis outlines research that scrutinises disruptive innovation factors that can influence financial service performance in the UAE. Specifically, this study examines the mediating effects of a disruptive business model on the relationship between disruptive innovation factors and financial service performance. It also examines the moderating effects of disruptive technology on the relationship between the disruptive business model and financial service performance.

The term 'disruptive innovation' generally emphasises how a new development significantly alters the existing business operations. Disruptive innovation is recognised as innovation and strategising their services or products to appeal to their most formidable and beneficial market environment. According to Schmidhuber et al. (2020), disruptive innovation comes in at the bottom of the market and service business in a "good enough" way to determine whether an innovator's business model will succeed. Consistent with the changing global landscape towards the industrial revolution and digital economy, many researchers are recognising disruptive innovation as a coherent value network of an innovative business model (Kim et al., 2020; Ritch and McColl, 2021) because it is related to sustaining innovation, competitiveness, and economic growth. In this case, disruptive innovation has been considered an essential input to the economic growth of a business operation.

Responding to the changing landscape towards disruptive innovation resulting from advanced technological development, the UAE government has focused seriously

on developing new disruptive technology platforms. Disruptive technology can be described as the platform that will use the newest disruptive technologies to digitise trade in the UAE and transform it into a knowledge-based economy (Sibanda et al., 2020). Disruptive innovation is the latest platform for embracing the future of innovation and technology because the UAE is gunning to become the next big technology start-up hub; hence, enabling disruptive innovation has become the leading national priority. In this respect, it is believed that disruptive innovation involves the technologies used to construct them simple to utilise and accessible to the immense selected market that improves its operations on a predictable timeframe for practices to drive sustainable growth and ultimately reinvent the value proposition of the business model itself (Ramdani et al., 2020).

However, due to the lack of transformation of today's disruptive innovation into practical regulation, the influence of disruptive innovation in the UAE is still at its beginning level (Sibanda et al., 2020). Moreover, this dilemma occurs due to disruptive technology, where the UAE has the highest banking service level, gaining digitalised business. Recognising that embracing disruptive technology will increase business speed and improve financial service performance (Timothy et al., 2021), this study also contributes towards achieving the UAE national agenda of building top business intelligence through efficient skills and digital resources.

As an introductory chapter of the thesis, this chapter is classified into eight sections. The first section confers the background of the study, accompanied by the problem statements in the second section. The third section outlines the research questions addressed in the study, and the fourth section outlines the objectives of the study. Next, the fifth section describes the scope of the study, and the sixth section confers the significance of the study. The seventh section describes the operational definitions of the constructs involved in the study, while the last section, section eight, contours the structure of the thesis.

## 1.2 Background of the study

Disruptive innovation is an innovative business idea for a technology platform, and its importance directly contributes to the growth of disruptive technology globally. Many countries drive toward disruptive innovation based on disruptive business models (Olabode et al., 2022). The development of disruptive innovation can be traced to the increasing growth of innovative technologies and increasing accessible transformation. For example, according to the Annual Global Innovation Index 2020 (Dutta et al., 2020), disruptive innovation in the UAE has steadily grown from 10 per cent in 2010 to 19 per cent in 2019.

It is contemplated to continue growing because of the technical ability to track financial service performance and analyse insights for optimising the banking service for better results. Similarly, based on a survey conducted by Technology Pro Research (Urbinati et al., 2022), disruptive innovation emphasises that 75 per cent of organisations have an innovative technology strategy, 25 per cent of businesses have completed the disruptive technology, and 45 per cent in the year 2019 focus on disruptive business model worldwide. The growing trends show the increasing need for disruptive innovation platforms worldwide.

Disruptive innovation is the process of innovating that enhances technologies to incrementally improve its operation (Ritch and McColl, 2021). The typical inception of disruptive innovation allows businesses to remain competitive through constant learning and continuous improvement towards innovation that ventures through technology to emerge their business model (Sibanda et al., 2020). Besides, it operates with high leverage of integrated knowledge and takes devastating challenges to strive towards tremendous success through a learning experience emphasising continual business model improvement. Disruptive innovations are equipped with both business models and technology innovation

that drive toward the modern world with a high-technology platform (Wang et al., 2021). Moreover, disruptive innovation will develop an innovation enhancement, and businesses are ingrained to learn unique criteria availability (Benzidia et al., 2021). Furthermore, the effects of disruptive innovation give a clear understanding of the innovation process from idea generation to structuring the business model. Disruptive innovation improves the affordability and availability of technologies through an innovation context that is enormously influential in business circles and predicts performance success (Reilly and Binns, 2019).

Countries worldwide have recognised the importance of implementing disruptive innovation to transition towards new economic innovation. In India and China, an emerging solution and innovation product needs the disruptive innovation capability of technology that changes the opportunities and market practice to innovative practices (Millar et al., 2018). Even in a developed country such as America, disruptive innovation is marked by high leverage of innovation knowledge and high growth potential in its economic power (Olabode et al., 2022). In this regard, technological knowledge and innovation skills are necessary for financial service performance. However, disruptive innovation does not emphasise technology innovation alone. Even researchers who have done their studies in this area failed to identify the factors contributing to financial service performance (Christensen et al., 2018). Therefore, there is a need to explore financial service performance that establishes technologies and business models to produce innovative business ideas. Yet, a proper method is needed to expose disruptive innovation to the actual market world (Si and Chen, 2020).

Future-ready disruptive innovation has become a significant concern in developing countries like the United Arab Emirates (UAE). According to the Global Competitiveness Report for 2020 for the World Economic Forum, the UAE ranked 26th out

of 80 countries in the world for disruptive innovation ranking. Salih (2020) asserted that nothing is in a more critical dilemma than disruptive innovation in the UAE. In this context, Coulson (2017) highlighted that disruptive innovation is performing on the road to recovery, aimed to prompt policymakers beyond the short-term growth of the UAE into a knowledge-based productivity economy (Goher et al., 2021).

In the UAE, disruptive innovation development and recovery priorities are highly needed through innovative technology partnerships (Lee et al., 2017). From the late 90s until the early 20s, disruptive innovation in the UAE has transformed towards a new economic system with disruptive technology for developing new information, goals, and tasks towards the productivity economy (Mumtaz and Parahoo, 2019). Yet, due to the lack of innovation expertise and the ineffectiveness of business models, the UAE government still struggles to revive financial service performance (Hasan et al., 2020).

The lack of innovation experts has affected the capability of disruptive innovation for adopting new and innovative practices facilitated by technology (Zairi, 2019) and fabricating new or innovative products in the priority process (Chandra et al., 2019). Further, ineffectiveness in business models has affected the attributes and characteristics of innovative technology that impact the growth of an organisation's future economy, which subsequently restricts the fundamental driver of disruptive innovation (Benzidia et al., 2021). In this case, the current global trend towards the transformation towards disruptive innovation and the prevalent usage and creation of disruptive technology in business performance requires determining economic systems for environmental sustainability and shared prosperity.

Despite its positive contributions to market-oriented, disruptive innovation has several issues (Hopp et al., 2018) that have significantly impacted organisational performance, business models, and innovation technologies (Kumaraswamy et al., 2018). For instance, disruptive innovation activities have contributed to long-term prosperity, resulting from
