Acknowledgements

There are many individuals, who gave freely of their time, wisdom and insight. Without producing a long list, to them we are especially grateful. Their spirit of sharing, openness and generosity made it all possible. We are much indebted to them.

Preface

One of the most challenging aspects of mathematics learning is to give students suitable examples and exercises which can improve their understanding.

This book is designed to familiarize the student with the form of questions asked in Statistics. The topics are based on the syllabus of Statistics teaching in UTeM.

The material in this book will cover questions and answers for:

- ❖ Data Description and Numerical Measures
- ❖ Probability
- ❖ Discrete Random Variables
- ❖ Continuous Random Variables
- ❖ Sampling Distributions
- ❖ Estimation
- ❖ Hypothesis Testing
- ❖ Estimation and Hypothesis Testing for Two Populations
- ❖ Correlation and Simple Linear Regression

An excellent student must have an initiative to learn before being taught by lecturers. By using this book, students can be more prepared before attending a tutorial session. The examples are presented in a sequence of steps with full details so that students can follow systematically.

In preparing this book, we would like to thank all the individuals involved. Such comments and feedback are always welcome.

CHAPTER ONE

DATA DESCRIPTION AND NUMERICAL MEASURES

CHAPTER ONE

DATA DESCRIPTION AND NUMERICAL MEASURES

Learning Objectives

Upon completion of this chapter, you should be able to

- ❖ Construct a frequency distribution
- ❖ Construct a histogram
- ❖ Construct a frequency polygon.
- ❖ Construct a relative frequency polygon.
- ❖ Construct an ogive.
- ❖ Determine the mean, variance and standard deviation for the given data set.
- ❖ Determine the mode, midrange and range for the given data set.

1.0 Introduction

In this chapter, there are two data classifications such as Qualitative and Quantitative. The qualitative data can be classified into nominal and ordinal data however the quantitative data can be classified as discrete and continuous data. Graphical and numerical methods are explained for both qualitative and also quantitative. Numerical measures will cover the measures of central tendency and the measures of dispersion.

1.1 Definition

Statistics is a field of study which implies collecting, presenting, analyzing and interpreting data as a basis for explanation, description and comparison. There two types of statistics such as descriptive statistics and inferential statistics.

Descriptive statistics is a study which involves organizing, displaying and describing data by using tables, graphs and summary measures.

Inferential statistics consists of generalizing from samples to populations, performing hypothesis tests, determining relationships among variables, and making predictions.

Population refers to every element in an observation which are of interest for data collection.

Sample refers to a certain number of elements that have been chosen from a population for observation. Sample is subset to population.

Raw data is the data that have been collected before they are processed and ranked.

APPENDICES

A. Normal Distribution Table

Areas under the standard normal curve

Tay Choo Chuan is a graduate with Bachelor of Science (Hons) degree in Mathematics, Master of Science degree (Quality and Productivity Improvement) and PhD in Mathematics from University Kebangsaan Malaysia (UKM). The author has over 20 years of experience teaching in two level of education: secondary and tertiary. He is currently attached to University Teknikal Malaysia Melaka (UTeM) as a senior lecturer in the Faculty of Electrical Engineering. He is also the author of several Mathematics books.

Hamzah Bin Sakidin received the Bachelor of Science, Diploma of Education and Master of Science in mathematical modeling from University Kebangsaan Malaysia (UKM), Bangi Selangor, Malaysia in 1993, 1994 and 2001 respectively. He received his PhD in mathematical modeling from University Putra Malaysia in 2008. He joined University Teknikal Malaysia Melaka (UTeM) as a mathematics lecturer in August 2003. Recently, he is a Senior lecturer in the Faculty of Electrical Engineering, University Teknikal Malaysia Melaka (UTeM). His research interests are mathematical modeling and applied mathematics.

Sek Yong Wee holds a Bachelor of Science degree in Statistics from University Kebangsaan Malaysia. He also obtained MSc in Information Technology from University Putra Malaysia. He has served as a lecturer since 2002. He is an experienced lecturer in teaching mathematics, probability and statistics.

Law Check Yee completed Master in Education and Bachelor of Science degree in University Kebangsaan Malaysia. She has seven years of experience in teaching mathematics and statistics subjects. She also has experience writing Probability and Statistics textbook.
